

Overview

The Project Guideline waist belt harness is designed to securely hold and mount a Google Pixel device at an angle of 15° from vertical. Comfort and stability is achieved with the addition of an elastic section that maintains the circumferential position of the mounting bracket while simultaneously allowing for user comfort when breathing. Additionally, the mounting bracket and elastic routing is designed to allow for maximum cooling of the Pixel device.

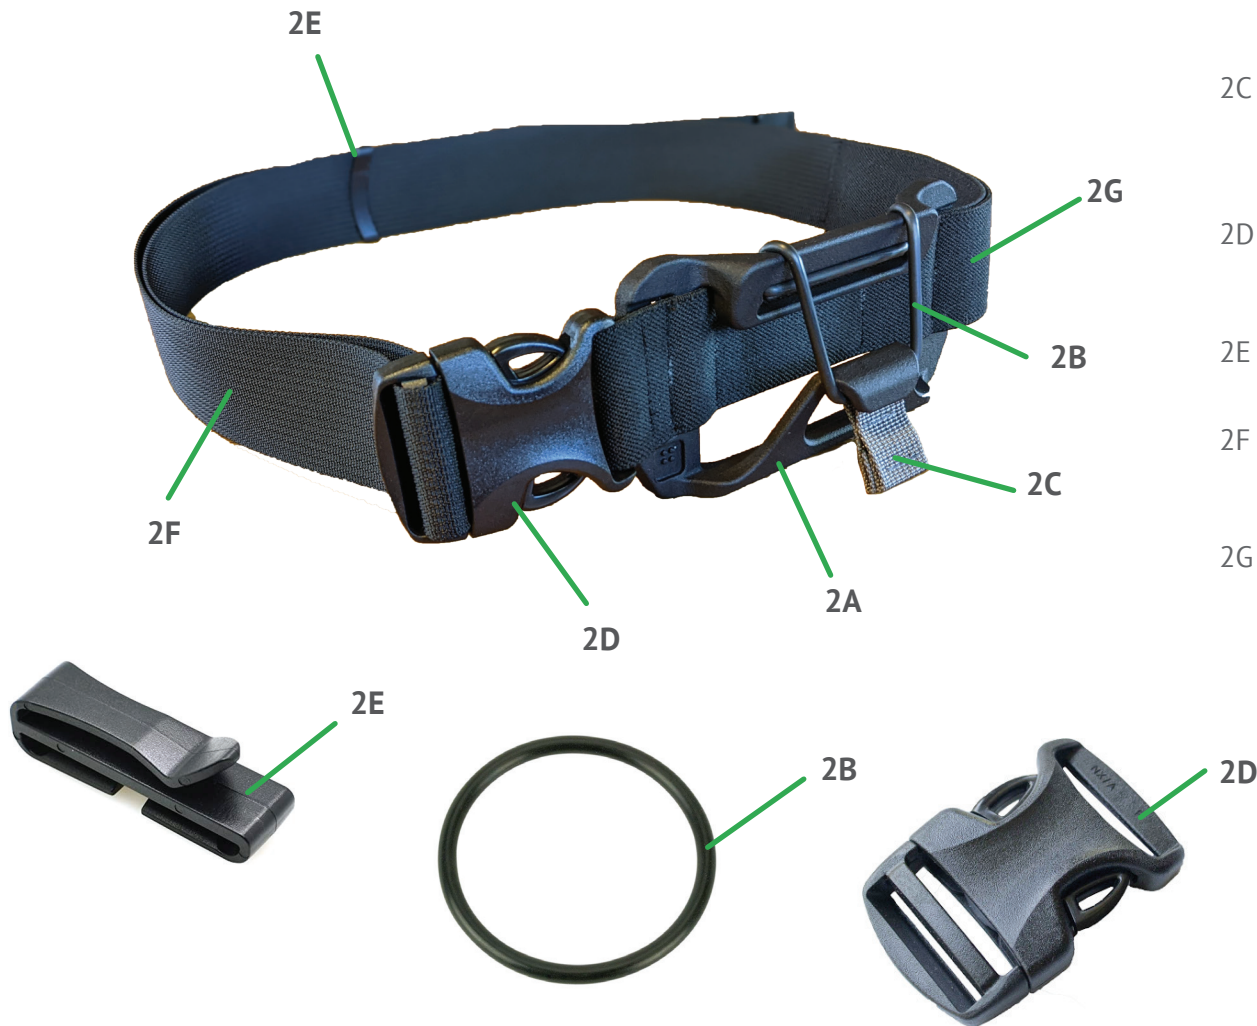

Phone Mount component may differ slightly from images but does not affect other dimensions
